### COMMUNICATION

The European Patent Office herewith transmits as an enclosure the European search report for the above-mentioned European patent application.

If applicable, copies of the documents cited in the European search report are attached.

Additional set(s) of copies of the documents cited in the European search report is (are) enclosed as well.

The following specifications given by the applicant have been approved by the Search Division:

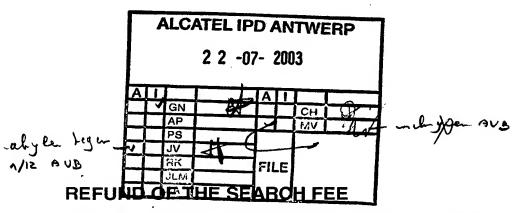

**Abstract** 

X title

The abstract was modified by the Search Division and the definitive text is attached to this communication.

The following figure will be published together with the abstract:

1

ON THE PARTY OF TH

If applicable under Article 10 Rules relating to fees, a separate communication from the Receiving Section on the refund of the search fee will be sent later.

# **Extended European Search Report**

This application is covered by the extended European search report pilot project at present running within the European Patent Office, applied to all European patent applications filed as first filing and searched on or after 01.07.03. Under this project the EPO issues together with the search report an opinion on whether the application and the invention to which it relates meet the requirements of the EPC. This non-binding opinion is issued free of charge as a service. This opinion may be used as the basis for an informed decision as to whether it is desired to pursue the application further or not.

For further details of this pilot project, the applicant's attention is directed to the Official Journal edition 5/2003. If any further immediate questions or comments arise the EPO Customer Services: +31-70-340 4500 or +49-89-2399 2828 can be contacted.

The examination has revealed that the application or the invention to which it relates appear **not** to meet the requirements of the Convention (see comments on enclosed Form 2906).

If the applicant wishes to continue with this application the examination fee must be paid. Where appropriate amendments can be filed to address the objections raised in the opinion, thus shortening the overall procedure. If no amendments are filed, the opinion will be re-issued as the first official communication under Article 96(2) and Rule 51(2) EPC.

If the examination fee has already been paid and the right to the communication under Article 96(1) EPC has been waived for this application, the first official communication under Article 96(2) and Rule 51(2) EPC will be issued promptly.

#### Description, pages:

1-11

as originally filed

Claims, No.:

1-10

as originally filed

Drawings, sheets:

12-2/2

as originally filed

The following document (D) is referred to in this communication; the numbering will be adhered to in the rest of the procedure:

D1: US 2002/172149 A1 (KINOSHITA HIROSHI ET AL) 21 November 2002 (2002-11-21)

- 2. Claim 1 is not clearly defined according to Article 84 EPC for the following reasons:
  - The step of "receiving one or more diversity parameters" is not clear in connection with the step of "exchanging information between said serving edge nodes". According to the description (cp. page 7, lines 17-20), a set of diversity parameters is received by the first serving edge node from a client source node.
  - It is furthermore essential to the definition of the claimed invention (Rule 29 (1) and (3)), that a connection is established between a client source node and a client destination node located in respective client networks whereby the client source node is connected to a first and second serving edge node

Communication/Minutes (Annex)

Notification/Procès-verbal (Annexe)

Blatt Sheet Feuille

2

Anmelde-Nr.:

Application No.: 03 290 252.0

via a first and second client edge node.

- The formulation "said connection" (claim 1, line 11) is unclear because it is not apparent whether it refers to the first or the further connection.
- 3. As explained below, some of the features in the apparatus claims 7 to 10 relate to a method of using the apparatus rather than clearly defining the apparatus in terms of its technical features. The intended limitations are therefore not clear from this claim, contrary to the requirements of Article 84 EPC. The relation of the explicitly defined apparatus features ("request-transceiver", "connectionparameter-transceiver" an "calculator") to the features of the method defined by claim 1 is furthermore unclear. According to the method, a connection is e.g. setup whereas the apparatus comprises only means for calculating a connection. The apparatus corresponding to the method should clearly identify the apparatus features corresponding to the method features defined by claim 1.
- 4. Claim 7 includes all the features of claim 8. Hence, claim 7 should be reformulated as a claim dependent on claim 8, cf. Rule 29(4) EPC and the Guidelines C-III, 3.5. The same is valid for independent claim 9 which comprises all the features of independent claim 10.
- 5. Document **D1** relates to the automatic setup of protection paths controlled by parameters exchanged between network nodes during connection setup. This is also possible at borders between networks, i.e. redundant paths are established also across these borders (cp. paragraph [0016]).

Hence, document D1 discloses, according to the features of claim 1:

- a connection and a further connection via a first and a second serving edge node in a serving network (FIG. 20: connection B-C-D via edge node C and connection B-G-H-I-D via edge node H);
- receiving diversity parameters defining diversities between said connections (paragraph [0020]]);

Communication/Minutes (Annex)

Notification/Procès-verbal (Annexe)

Blatt Sheet Feuille

3

Anmelde-Nr.:

Application No.: 03 290 252.0 Demande no.

- exchanging information between the serving edge nodes (paragrapg[0022])), and
- setting up at least part of a connection (paragraph [0019]).

The subject-matter of claim 1 is therefore not new (Article 54(1) and (2) EPC). Claim 1 is thus not allowable (Article 52(1) EPC).

- 6. The same objection of lack of novelty also applies, mutatis mutandis, to independent claims 7 to 10 which relate to respective apparatus entirely corresponding to the method defined by claim 1. Claims 7 to 10 are thus also not allowable under Articles 52(1), 54(1) and (2) EPC for the same reasons set out above with respect to claim 1.
- 7. Dependent **claims 2 to 6** do not appear to contain any additional features which, in combination with the features of any claim to which they refer, meet the requirements of the EPC with respect to novelty and/or inventive step, the reasons being as follows:
  - Claim 2: FIG. 20: nodes B and G.
  - Claims 3-6: each node of the working path A-B-C-D-E performs the same operations, e.g. edge node H receives a protection path setup request from node C for bypassing e.g. node D, etc. (cp. paragraph [0135]). The protection path setup messages according to D1 carry various parameters. At least node diversity is disclosed in D1 (cp. paragraph [0082]-[0100]). Other modes of diversity are part of common expert knowledge in the art.
- 8. It is not at present apparent which part of the application could serve as a basis for a new, allowable claim. Should the applicant nevertheless regard some particular matter as patentable, an independent claim should be filed taking account of Rule 29(1) EPC. The applicant should also indicate in the letter of reply the difference of the subject-matter of the new claim vis-à-vis the state of the art and the significance thereof.

Any newly filed independent claim should be in the two-part form recommended by Rule 29(1) EPC having a pre-characterizing portion which correctly reflects the prior art of documents D1.

Bescheid/Protokoll (Anlage)

Communication/Minutes (Annex)

Notification/Procès-verbal (Annexe)

Blatt Sheet Feuille

4

Anmelde-Nr.: Application No.: Demande n°:

Application No.: 03 290 252.0

The opening part of the description should be modified to bring it into agreement with an amended independent claim and to take the relevant background art disclosed in document D1 into account (Rule 27(1)(b) EPC).
